Reaffirming Our Commitment to Support Diversity, Equity, and Inclusion Initiatives

As scientific societies, our mission is to advance the teaching and application of science for the benefit of all people. As part of this commitment, we support researchers who are examining the effects of systemic racism and discrimination in our society. We are also dedicated to monitoring and dismantling inequitable systems that continue to suppress many voices in our field.

We are disturbed by recent activities in Florida [and elsewhere](#) that conflict with both of these principles. In January, [the presidents of 28 state and community colleges in Florida said](#) that they would identify and eliminate any academic requirement or program that “compels belief in critical race theory or related concepts such as intersectionality.” This statement comes [after the office of Florida Gov. Ron DeSantis requested](#) that public colleges and universities submit comprehensive lists of their spending related to diversity initiatives and critical race theory. These actions culminated with [Gov. DeSantis calling for the dismantling of diversity programs](#) at the state’s colleges and universities while DeSantis-appointed trustees removed the president of New College of Florida in Sarasota.

We strongly oppose interventions to censor the teaching of science or limit academic freedom. Sharing research findings and discussing these issues is crucial for preparing the next generation of scientists, and preventing faculty from doing so jeopardizes the future of our field. We commend faculty members like Elizabeth R. Brown and Parvez Ahmed [who have spoken out about the harmful impact of these restrictions on the quality of higher education](#).

We also vehemently oppose any actions designed to curb diversity, equity, and inclusion initiatives at colleges and universities. These efforts are essential for addressing long-standing disparities in our society, which have left many communities woefully underrepresented.¹

We urge policymakers and public officials everywhere to support instructors and students who are passionate about understanding the effects of race and racism in our society, as well as mitigating its effects on our own field. It is only through upholding and expanding these initiatives that we can work toward fostering a more diverse, equitable, and inclusive environment at all places of learning, and in society more generally.
